Nordic Star

- The hydraulic “soft close” system means that the seat always lands softly on the porcelain bowl. The components are built in to facilitate cleaning and improve hygiene.
- The cistern lid is seated tightly on the porcelain. Choose between white and matt chrome lids.
- The flexible water connection makes installation easier and ensures a neater result.
- The surface of the Nordic Star bowl is treated with **ceramicplus**, which prevents the accumulation of water stains, dirt and lime scale. This surface and the glazing under the rim facilitate cleaning and improve hygiene.

Sit comfortably

Bathrooms are for comfort and pleasure. This is where you go to enjoy some of the rare, tranquil moments of the day in peace and quiet. Neat, functional bathroom fixtures make these times even more enjoyable. Nordic Star is our finest WC. With its attractive lines and finely crafted details, it adds a new dimension to any bathroom. In addition, the WC is one of the pieces of furniture in our homes that we use most regularly, so there is every reason to invest in function and quality. With Nordic Star, you can be sure of sitting comfortably every day for years to come.

The bowl of Nordic Star is treated with **ceramicplus**, is a porcelain surface treatment that provides a dirt repellent surface which in practice whisks away any trace that the porcelain has been used previously. With a **ceramicplus** finish, the pores in the porcelain are so tight that the water cannot “get a foothold” and so simply runs off, taking with it the dirt, lime scale and other elements that are normally left behind. In the unlikely event that anything is left behind, it can easily be wiped off with a damp cloth, leaving the porcelain shiny as new again.

This label is allocated to certified plumbing products in accordance with requirements laid down and controlled by INSTA-CERT. To be awarded this label, products have to meet fixed criteria for production, guarantee periods, parts, documentation and technical suitability for installation in the Nordic region.
